## OVERVIEW

Reliability and efficiency are what best describe our AlierSGA logistics software. Developed with the latest Microsoft technology, it has automated communication links with the main ERP's in the market and with more than 20 transport agencies, allowing complete control of stocks and traceability throughout the entire supply chain.

It operates in any sector of activity, working individually or synchronized with other external softwares, AlierSGA allows companies to fully manage their logistics, as well as the management of internal and external transport. Thanks to the transport broker, the system will automatically select the best transport agency you have contracted, depending on the rates and characteristics of the shipment. Also integrating trackings, shipment status and print management of transport labels, you will not need to access the web pages of transport agencies or external programs to perform additional procedures.
