

# SNAPFULFIL

# EXTENDED PROFILE

## OVERVIEW

SnapFulfil is a cloud-based WMS provided by Synergy Logistics. It is designed for companies of all sizes in the retail, wholesale, 3PL, and manufacturing industries.

SnapFulfil is designed for scalability and adaptability, allowing users to fit the software to their needs without the need for expensive system modifications. For example, the workflow and rules engines are both customizable, and the 3PL module offers a range of features to meet the needs of multi-customer warehouse operations.

Elsewhere, SnapFulfil offers a full range of core functionality, RF-directed put-away, multiple picking methodologies, real-time task management, replenishment, and analytics. There are various editions that offer feature combinations to suit different sizes and types of companies.

There is a native Android app to optimize SnapFulfil's performance on mobile devices, and implementation can take as little as 45 days. Pricing is calculated on a per user/month model and includes implementation services like integration and training, a full support package, and all essential hardware.
