

BLUE LINK ERP

EXTENDED PROFILE

OVERVIEW

One of Blue Link ERP's key warehouse management strengths is its ability to monitor complete order management, this includes order entry, through to inventory management then shipping. Blue Link ERP's accounting module allows users to manage accounts payable and receivable, plus payroll in-house. This is aided by multicurrency and multi-language functionality.

The core application of the platform is the inventory management functions, including order entry, purchasing, and procurement.

The platform allows for 6 to 50 concurrent users and can also be integrated with Amazon and eBay to help deal with inventory management and accounting. Blue Link ERP can be implemented on-premise or accessed through the cloud, with the hosted option priced on a subscription basis. Blue Link ERP has the option for remote desktop access, and native iOS and Android apps are available.

Further services from Blue Link include data migration, user training, customization and ongoing after-sales support.
