

# LATITUDE WMS

# EXTENDED PROFILE

## OVERVIEW

Latitude WMS is an enterprise-grade WMS that automates warehousing and distribution to provide real-time online information about inventory. Latitude interfaces to 20+ ERP systems like SAP, Oracle/JDE, Epicor, Infor, and Microsoft, to name a few. Available on-premise or cloud-based, Latitude WMS automates core warehouse transactions such as receiving/putaway, paperless multi-zone picking, cycle counting and shipping, along with employee performance and warehouse management reporting.

Handling consignment and vendor managed inventories, lot number/serial number control, slotting optimization, replenishment, retail conformance and customer-specific labeling and packing lists are just a few of the 50+ optional modules available. Latitude WMS also provides necessary inputs to optimize conveyor throughput, package handling and control, as well as carousel system management, including pick-to-light.

The Latitude suite also offers carrier-compliant, small parcel manifest software that can be integrated with Latitude or stand-alone. Latitude provides the tools to manage truck route shipping, truckload verification, and on-site delivery confirmation, as well inbound transportation scheduling.

PathGuide's Advanced Vendor Managed Inventory (VMI) solution offers distributors complete visibility into supplier' management of inventory and re-imagines the restocking process for customers entrusted with managing inventory.
