

EPICOR WMS

EXTENDED PROFILE

OVERVIEW

Epicor WMS software is built with the needs of fulfillment service providers in mind, while also providing core functionality required for general warehouse management operations. This core functionality includes inventory control, task and load management, multi-channel order processing, and kitting.

The Epicor warehouse management system is part of a larger suite of supply chain management applications that encompasses customer relationship management, supplier relationship management, and supply chain execution.

Epicor WMS has its own handheld inventory management hardware, but the software can also integrate with technology from other vendors.

As part of the wider supply chain management suite, users of Epicor can expect to handle purchasing, suppliers, and requirements planning amongst other features not usually found in a typical WMS.
