

CATALYST WMS

EXTENDED PROFILE

OVERVIEW

Catalyst WMS, from Aptean, is a system designed for use by companies of any size with complex supply chain and distribution requirements. The system is specialized for users with multi-site and multi-channel business processes.

Inventory, labor, and yard management are some of the systems key offerings. The system operates on a rule-based workflow, meaning that users can set event-triggered rules as a means of automating their business process. This event-based system also means that Catalyst can be customized to meet existing business processes and integrate with existing enterprise software applications.

Outside of the expected WMS applications, Catalyst also offers dynamic route planning and cross docking, features designed to cater for the needs of multi-facility companies.

A cloud-based WMS, Catalyst can integrate with ERPs and order management platforms, and can, of course, be combined with Aptean software products.
