

# DATEX FOOTPRINT WMS

## EXTENDED PROFILE

## OVERVIEW

Datex FootPrint WMS is a software package aimed at medium-sized companies in the manufacturing and supply chain industries.

The solution is designed for firms aiming to streamline their warehousing and inventory management systems by processing data in real-time. It is built using Microsoft's NET technology and uses Microsoft SQL Reporting Services and so is ideal for Microsoft houses or companies already used to working with Microsoft software. Datex FootPrint WMS has been validated for Microsoft Gold Partner Competency for Software Application Development.

Key features include a yard management module that allows users to monitor and optimize inventory flow through a warehouse or yard in real-time. The trans-load feature allows users to enter information about inbound and outbound inventory into a single window to enable the synchronization of shipping and receiving processes. The core WMS module allows for blind, partial, and bulk receiving and incorporates a directed, automatic putaway feature.

Datex offers three cloud-based packages of FootPrint WMS (SaaS, Flex, and Enterprise), each offering a different level of services and control, with an on-premise installation also available. FootPrint WMS is accessible via a web browser on desktop and mobile devices.
