

# OPTIMISER WMS

# EXTENDED PROFILE

## OVERVIEW

Optimiser is a flexible WMS designed to increase warehouse efficiency for small to medium-sized businesses across a number of sectors. It can be used as part of e-commerce, third-party logistics, or in the management of an own-goods warehouse.

Optimiser WMS aims to be cost-effective for SMBs in two key ways. First, the software is modular, meaning that businesses can buy into portions of the software that will most benefit them and then keep adding to the modules as the enterprise grows. This means there is a clean upgrade path, keeping the WMS relevant into the future. Secondly, as there is a SaaS (cloud platform) option, there is no need for new or growing businesses to invest heavily in IT or hardware.

Basic functions of the Optimiser WMS include importing orders, recording dispatches, tracking stock, and real-time reports. Optimiser WMS is also able to integrate with platforms such as Amazon, eBay, Magento, and Shopify. It can also link directly to couriers such as DPD, Royal Mail, Yodel, APC, and more, as well as offering an automatic choice of courier through GFS or Metapack.

The software can be deployed via the cloud or can be installed on-site, with a native web app for remote access on mobile devices. Pricing is based on a per-user basis, and implementation will typically take around five weeks.
