

# ENTERPRISE WMS

# EXTENDED PROFILE

## OVERVIEW

Ramp's Enterprise WMS is designed for companies of all sizes. Whilst the software can be adapted for a variety of needs, Ramp specializes in providing solutions for 3PL providers.

One of Enterprise WMS' key selling points is its dynamic reporting functionality. The WMS software provides customized, real-time reporting capabilities and aims to make business data much more accessible for warehouse managers. It also offers a wide range of customizations, including Amazon and eBay, Quickbooks, and Microsoft Dynamics.

Enterprise WMS is a "complete" solution and offers a comprehensive range of core WMS features alongside some extras, including dock management, route planning, and shipping management. Ramp Software also offers Interchange EDI alongside their WMS, which is designed to streamline integration activities.

The WMS can be deployed as a cloud-based solution or on-premise. Pricing is based on a one-off per-user license fee, with the price decreasing after the first 20 licenses. A native Android app is available for users who want to access the software via mobile devices. The implementation time of Enterprise WMS varies on the complexity of the project.
