

STOCKER WMS

EXTENDED PROFILE

OVERVIEW

PulseStar's Stocker WMS is a warehouse management tool designed for small companies. The WMS is applicable for two warehouse types; wholesale and 3PL.

Stocker WMS covers all basic warehouse management functions, including inventory management, barcode and serial tracking, picking and packing and product rotation. Users can also use analytics functions, powered by real-time data, to drill down into warehouse activities and find areas for improvement.

Stocker WMS can be used with PulseStar's 'Ranger' RF mobile device solution. This can increase warehouse productivity, improve the accuracy of picking activities and offer a real-time view of warehouse inventory. Whilst it can be implemented without mobile devices this turns Stocker into a paper driven system, and instructions must be printed out and handed to warehouse staff.

The Stocker WMS is installed on-premise. There is a one-off license fee for use, and the software will run on any computer on the Windows operating system. On-site training and implementation services are available an extra charge, and licenses include basic email support and issue reporting.
